(54) Title: PHEX SUBSTRATES AND METHODS USING SAME

(57) Abstract: A fluorogenic PHEX substrate comprising a peptide unit; and a quenche runit capable of conferring fluorescence on said substrate attached to an amino acid residue at a first end of the peptide unit; and a quencher unit capable of providing intramolecal unit, respectively; the amino acid residue at socid maid and acid residues at positions P<sub>2</sub>, P<sub>1</sub>, P<sub>1</sub>, P<sub>2</sub> of the peptide unit, respectively; the amino acid residue as a position say and a sequence P<sub>2</sub>, P<sub>1</sub>, P<sub>1</sub>, P<sub>2</sub> of 4 amino acid residues at positions P<sub>2</sub>, P<sub>1</sub>, P<sub>1</sub>, P<sub>1</sub> and P<sub>2</sub> of the peptide unit, respectively; the amino acid residue as a position say and a sequence provides and a least 6 amino acids residues including a sequence P2-P1-P2 of 4 amino acid residues at positions P2, P1, P1 and P2 of the peptide unit, respectively; the amino acid residue at position P<sub>2</sub> being any amino acid residue; the amino acid residue at position P, being any amino acid residue except an isoleucine, a valine, or a histidine residue; the amino acid residue at position P<sub>1</sub>, being an acidic amino acid residue selected from the group consisting of a glutamic acid residue and an aspartic acid residue, and being located at least 2 amino acid residues distal to both the fluorophore and the quencher units; the amino acid residue at position P2 being any amino acid residue except a leucine, a proline or a glycine residue, with the proviso that said peptide unit does not have the sequence as set forth in SEQ ID NO:1. Methods of using the peptide sequence unit to identify PHEX modulators and for detecting PHEX in a sample.
